GIS is a technological field that incorporates geographical features with tabular data in order to map, analyze, and assess real-world problems.
Drones Take Off as Wildlife Conservation Tool

Red pandas began to track using drones and GPS. They are on the verge of extinction

BY JOHN KESSLER  JUNE 15, 2020 11:11 AM GMT+0300  243 VIEWS

Heat-detecting drones are a cheaper, more efficient way to find koalas

Drones let B.C. researchers act as 'fly on the wall' to observe orca behaviour

UBC scientists are studying the feeding behaviour of southern and northern resident killer whales

Researchers use virtual reality, GIS data to enhance trail management

How augmented reality can help create sustainable, environment-friendly smart cities

Commitments this week by 40 world leaders and more than 300 businesses to address climate change, with ambitious goals for emission reductions, make me excited about our ability to achieve meaningful change in my lifetime. In the wake of the coronavirus pandemic, our collective vulnerability helps us realize we are in this together. The pandemic disruption has provided a pause for reflection, and leaders are wise to use this time to focus on the causes of increasing climate calamities and biodiversity decline. We can, and must, take global action.
Participatory GIS & Community Science

As Scientists Struggle with Rollbacks, Stay At Home Orders and Funding Cuts, Citizens Fill the Gap

Citizen science sees a boom in participation by people motivated by cuts of environmental protections and Covid-19 impacts on data gathering and justice.
